▮▮ CALL IT LOVE. CALL IT FANATICISM. WE CALL IT PASSION FOR DETAIL. ▮▮

Since 1963, Lamborghini has been building its legendary super sports cars in Sant'Agata Bolognese. When building each vehicle, it isn't just about revolutionary technology but also about absolute perfection. This manifests itself in the cars' lightning-fast gearboxes, stitching on the steering wheel, the revolutionary monocoque material, and even in the valve caps. The legend of Lamborghini is carried by the people who build these cars. They're handcrafted with passion and dedication using high-tech materials in a small village. These values don't just apply to the cars themselves but also to every single original accessory.

"Accessori Originali Lamborghini allow our customers to place greater emphasis on their own personalities and make their Lamborghinis even more unique," says Boris Puddu, Head of Spare Parts and Accessories.

Each and every accessory boasts outstanding quality, first-rate technology and a signature Lamborghini design - and excels thanks to the attention to detail that went into making it. The aim never changes: customers' expectations should not

just be met but exceeded, in terms of both quality and service. Lamborghini proves its ability to do this time after time, something that is reflected in the company's high customer satisfaction rates. Boris Puddu attributes this in part to the exceptional availability of spare parts.

"We have a service rate of almost 98%. If, by way of exception, a part happens not to be available immediately, we guarantee minimal delivery times."

Whether in the workshop, at Centro Stile or anywhere else in the world, every single Lamborghini employee, with their skills and knowledge, plays their part in making the company unique. But most of all with their passion and love for the brand.

A CARBON FIBER MASTERPIECE. AND THE RESULT OF 120 HOURS OF PRECISION WORK.

THERE IS A LONG TRADITION OF CRAFTSMANSHIP AT LAMBORGHINI. THERE IS ALSO A LONG TRADITION OF WORKING WITH HIGH-TECH MATERIALS SUCH AS CARBON FIBER. THE MONOCOQUE OF THE AVENTADOR IS A PRIME EXAMPLE OF THIS. IT IS MADE ENTIRELY OF CARBON FIBER AND IS THEREFORE EXCEPTIONALLY LIGHT AND EXTREMELY RESILIENT. BUT IT DOESN'T JUST BOAST EXCELLENT INTERNAL TRAITS - IT REALLY LOOKS THE PART, TOO.

The first thing that really stands out with a Lamborghini is its design - something that makes the exclusive super sports cars from Sant'Agata Bolognese so distinctive. Devi Caselli, After Sales Organizational Unit, is responsible for ensuring that the work of the designers at Centro Stile always shines flawlessly. For ten years, he has been getting the vehicles prepped for trade fairs, photo shoots and meetings held with journalists.

"You don't get a second chance to make a first impression. So it has to be perfect - from the roof right down to the valve caps."

First off, he scrutinizes the surface of the vehicle from every angle, with nothing getting past his merciless gaze; even the minutest damage to the paintwork that would go unnoticed by most people has to be rectified. The next step is to clear the surface of any dirt particles that may cause scratches to appear if scrubbed. Only then can the polishing commence - with an attention to detail that can only be achieved by someone who's truly passionate not only about the brand, but also the cars. With a practiced yet careful hand, Caselli attends to

the paintwork. He then reaches for another sponge and another polish and starts from the very beginning - until even the tiniest detail is presented in its best light.

"No polishing machine can cater to the unique shape and details of a Lamborghini - you simply need to have a feel for it."

Caselli makes no secret about the products he uses: Lamborghini care products. These are handmade and ideally suited to the various interiors and finishes of the vehicles. During his time at Lamborghini, he's had his hands on many models - from the Murciélago and the Gallardo right through to the Aventador. Prototypes and special models such as the Reventón and the Estoque have also been treated with the utmost care.

▣▣ I WORK WITH THE MOST PRECISE TOOLS OF ALL: MY HANDS. ▣▣

EACH MODEL IS UNIQUE IN BOTH ITS SHAPE AND CHARACTER. IT'S A CHALLENGE I SET MYSELF ANEW EACH AND EVERY DAY, WITH THE SAME PASSION I HAD ON DAY ONE.

**CAR CARE KIT:**

A Lamborghini is built by hand. And should be cared for by hand, too. Not a problem with this selection of quality care products put together especially for your Lamborghini. In fact, it turns car care from a problem into a pleasure.

Aventador | Gallardo | Murciélago

**BATTERY CHARGER AND MAINTAINER:**

You can keep your car battery ready and raring to go with this equipment, even when your Lamborghini has been stationary for a long period. It even extends the battery life and can be connected to the battery quickly and easily.

Aventador | Gallardo | Murciélago

**ANTI-STONE CHIPPING TRANSPARENT FILM:**

This transparent anti-stone chipping film is applied by hand by seasoned experts and protects all of the car body parts that are prone to being chipped by stones.

Aventador | Gallardo | Murciélago

**THE FINE ART OF APPLYING PAINTWORK.**

Depending on the model, it takes up to 15 liters of paint to paint a Lamborghini - not to mention the great deal of heart and soul invested in the work. The painter carefully sands down the surface by hand, applies a layer of primer, and then closely inspects the bodywork. They are trained to pinpoint and then remove even the minutest of bumps. Only then is the desired color sprayed on in a process that takes twelve hours. Following that, a layer of protective lacquer is applied to the paintwork and the painter spends around 50 hours buffing up the paintwork until it sparkles. Including drying times, a Lamborghini can spend a good 250 hours in the paint shop - all so that it never loses its sheen.

CARBON-FIBER-LOOK CAR COVER:

Lamborghini design has the power to really turn heads - even when the Lamborghini itself is hidden from view. This tailored carbon-fiber-look car cover is exclusively available as an aftersales accessory and can be personalized with your name. It's made from a high-tech material that's stretchable, breathable, oil and water-resistant, and filters out UV radiation. In short, it's perfectly suited to be used under the open sky.

Aventador | Gallardo | Murciélago

Something made with such loving care deserves to be protected - with these customized covers.

▣▣ I LOVE COMPLEX TECHNOLOGY. WHEN IT LOOKS LIKE SOMETHING CAN'T BE DONE, THAT'S WHERE IT GETS INTERESTING. ▣▣

The number of electrical and electronic components in our vehicles increases from one model to the next - and with every additional feature that relies on the car's electrical system. This system, which is largely created by hand, connects these control units, sensors, bus systems and cables, and transfers energy and information. This is a complex world with its own rules, and you need to have a real passion for it in order to get to grips with the finer details and maximize its potential. Gerardo Magnani, After Sales Organization Unit, is at home in this world and speaks the language of cars.

"To put it simply, my work focuses on the development of systems that operate at the interface with the vehicle."

One thing these systems do is help the technicians in their work - which is becoming ever more demanding on account of its increasing complexity. Diagnostic systems, for instance, help improve maintenance work and reduce the length of time it takes.

"The customer can also benefit from this thanks to a swift, careful and reliable service."

Numerous other technological innovations find a place in the vehicles, including the refined, satellite-controlled GPS/GSM anti-theft system. This establishes a connection with numerous servers and, if requested, provides precise information on the vehicle's location, wherever in the world the Lamborghini happens to be.

"It also prevents continued operation if the vehicle is started without authorization," explains Magnani.

Each Lamborghini is a technological masterpiece, the sum of thousands of individual parts and the result of countless hours of dedicated work from more than 700 employees - all of whom have contributed to making it what it is: an exceptional super sports car that delivers a phenomenal driving experience. Customers deserve to receive a vehicle that's safeguarded with the same amount of passion.

**GSM/GPS TRACKING SYSTEM:**

When you love something, you keep it out of the reach of strangers. But if your Lamborghini is nonetheless taken without your permission, the anti-theft tracking system immediately notifies the control center, which is able to localize your Lamborghini instantly.

Aventador | Gallardo | Murciélago

**DIGITAL PRESSURE GAUGE:**

Digital pressure gauge - the easy way to check your tire pressure, whenever and wherever.

Aventador | Gallardo | Murciélago

**EMERGENCY & FIRST-AID KIT:**

This emergency kit consists of a warning triangle, a safety jacket, three glow sticks (2x30 minutes, 1x12 hours) and a dynamo flashlight. It also contains bandages, scissors, disposable gloves, and a thermal blanket.

Aventador | Gallardo | Murciélago

Customer satisfaction is a commitment based on outstanding quality, which is a core value that the company lives and breathes every single day.

"Lamborghini is uncompromising in every respect and it goes without saying that this can be felt in terms of quality too. We set ourselves incredibly high standards and raise the benchmark even further with every model we make," explains Fabio Pertile, Suspensions Specialist.

A look behind the scenes shows just how seriously this commitment is taken. Starting with Research and Development, employees from every division are incorporated into the quality assurance process, in order to ensure superior standards from the very beginning.

"The presence of a Quality Assurance employee who advises and works closely with colleagues from other divisions is mandatory at every stage - whether theoretical or operational."

Passion, care and a love for detail are indispensable - whether evaluating individual components in line with the highest standards, checking that measurements fall within tolerances

of a few thousandths of a millimeter or inspecting aesthetic components with the utmost precision. In order to illustrate just how stringent these criteria are at Lamborghini, Pertile uses the example of wheel rims that have undergone a special surface treatment: brushing.

"These rims, for instance, are subjected to a complete double validation process before entering series production."

One of these processes consists of five tests that need to be performed - something that lasts two months in total. During series production itself, further checks are conducted on each rim made in order to ensure that nothing is left to chance. All this is governed by the no-mistake philosophy and, when asked how the customer can experience this, Pertile was self-assured in his response:

"Admire a Lamborghini from the outside and then sit inside. Let your senses take over - see, hear and feel. Then, do the same with a competitor's vehicle and you'll notice how the difference is reflected in every single detail."

QUALITY IS ALL ABOUT PASSION - AND THAT'S SOMETHING YOU WON'T GET FROM ANY MACHINE IN THE WORLD. IT TAKES BLOOD, SWEAT AND TEARS INSTEAD.

"RA" POLISHED RIMS

"RA" POLISHED RIMS KIT:

These polished alloy wheels each feature ten slender twin spokes and are produced using an elaborate forging technique. What's more, they're also available exclusively as an aftersales accessory.

— | Gallardo | —

"CALLISTO" SILVER RIMS KIT:

Lamborghini rims are designed in Sant'Agata and are carefully manufactured using lightweight aluminum. Or, to be more precise, they are forged from a single piece of aluminum until they are perfectly shaped. They are therefore harder and can be made thinner. Making your Lamborghini lighter - and faster.

THE DESIGNERS' TOOLS: PEN, PAPER, AND FOUR YEARS OF OBSESSION.

A Lamborghini is instantly recognizable. Crisp edges, precise lines and clean surfaces result in design that is reduced to the essentials. And this philosophy is systematically expanded at Centro Stile, Lamborghini's very own design center. Day after day - and sometimes night after night, too - the designers and model builders toil away on two floors to lend the spirit of the bull a fascinating shape time and again. It can take around four years to progress from the first hand-drawn sketch to a production-ready model. And on the way, there may be up to 2,000 drawings, countless hours of overtime, and a whole lot of passion.

VALVE CAPS WITH LOGO KIT:

Love displayed down to the very last detail: this set of valve caps is engraved with the Lamborghini logo.

Aventador | Gallardo | Murciélago

**LICENCE PLATE SUPPORT:**

An inconspicuous and therefore ingenious idea developed in Sant'Agata Bolognese: The design of this license plate support means that holes can be drilled somewhere on the bumper where they are not visible.

- | Gallardo | -

**TRANSPARENT ENGINE BONNET KIT:**

Something handcrafted by eight mechanics over a period of twelve hours is not merely an engine - it's a work of art. And it deserves to be shown off as such, with these transparent hoods that have been specially designed for each model.

- | Aventador | Gallardo | Murciélago

**LIGHTS KIT:**

Extra LED lights in the engine bay and footwell (only in conjunction with a transparent hood).

▣▣ A LAMBORGHINI DRIVER HAS GASOLINE IN HIS VEINS - PUMPED BY A HEART FULL OF PASSION. ▣▣

Many boys in Sant'Agata Bolognese and all over the world dream of getting to drive a Lamborghini. For Giorgio Sanna, this childhood dream comes true virtually every single day, as he's the responsible of the test drivers in the Research and Development department of Automobili Lamborghini Holding S.p.A. But there's so much more to his job than just driving prototypes of the world's most thrilling super sports cars; hard work and devotion are also a big part of what he does.

"An annual testing schedule of over 200,000 kilometers is nothing out of the ordinary. So it's no wonder that I spend at least 200 days a year traveling all over the world."

The majority of the work conducted on the prototypes takes place in Italy. There is a handling track with its own workshop which is the ideal place to make improvements as early as possible in the development process and also keep everything under wraps. The vehicles are also put through their paces in extreme weather conditions in Nordic countries - always pushed to their limits in order to guarantee optimum performance in each and every driving situation. In countless tests,

Sanna checks hundreds of parameters and looks out for even the tiniest defect. Any unwanted sound or deviation has to be pinpointed, the cause determined and the fault remedied - with every single opportunity taken to optimize the vehicle. Only then can series production of the prototype begin:

"The aim is to fine-tune every car until it's perfect. We simply won't settle for anything less."

Alongside his extensive experience and his intuition on the pedals, Sanna draws on high-tech aids that are also used in motorsports. The video recording and telemetry system provides Sanna and the technicians with a wealth of information.

"Analyzing the vehicle's technical data allows us to get a better understanding of how it behaves and further advance handling and driving pleasure."

The system is also available to customers as an Accessori Originali so that they can improve their driving style and maximize the performance of their Lamborghini. But before a

Lamborghini can be delivered to the customer, the series vehicle has to undergo one final test: it has to prove its mettle on the roads around Sant'Agata Bolognese. Only when every parameter is exactly as it should be and the only thing you can feel is unadulterated driving pleasure can the vehicle truly be termed a "Lamborghini" and delivered to the customer. When asked whether getting behind the wheel of a Lamborghini is still something special when you do it day in, day out, Sanna responds by saying:

"Sitting in a new model, starting the engine for the very first time and completing the first few laps is something that still sets my pulse racing, even after all these years and with so many test drives under my belt. To some degree, helping develop a prototype is a bit like watching a child grow up."

VIDEO RECORDING AND TELEMETRY SYSTEM:
Improve your performance on the racetrack and record your most spectacular drives for posterity using the two video cameras, an in-car microphone, a GPS sensor, your car's onboard data, and two different software programs.

**EVERY GRAM COUNTS.**

Carbon fiber is a very resilient and extra light-weight material, and is therefore considered to be THE technology of the future in the automotive industry. They have already been using it at Sant'Agata Bolognese for more than 30 years. Our developers at our two research centers delve into innovative construction and production methods day in, day out, always with a view to reducing vehicle weight and therefore boosting performance - even if it means conducting countless elaborate experiments in the process. Because at the end of the day, every single gram counts.

Sewing machines softly whirl and scissors clack. Leather cuttings that lie on the table await their fate. In the selleria, items continue to be exclusively handmade. According to Stefano Fabbri, in charge of Upholstery in the production area, it wouldn't be possible to do this any other way.

"Leather is a natural product. No two pieces are identical, each one is matchless. And that's exactly how they should be treated." Around fifty employees work in the selleria, all of whom are master craftspeople. However, that's not to say that working with such elegant materials isn't an ongoing learning process. A steady hand, high powers of concentration and great manual dexterity are essential. But above all, passion and dedication are the ingredients needed to meet the high quality standards. Besides leather, the selleria also works with Alcantara®, a synthetic material specially designed for the automotive realm.

"Our customers choose the material that best fits their needs. I prefer to work with leather because of its texture. It's a "living" material that responds differently every time it's handled and presents renewed challenges."

There are no fully automated machines at the selleria but rather tables and sewing machines operated by skilled seamstresses and seamstresses. They work on the cuttings, joining and

sewing them together in a way that only years of experience and dexterous hands know how to do. First of all, they warm up the material to make it elastic and then use it to cover the some 70 interior parts. Lamborghini works exclusively with leather of the finest quality to produce seats, steering wheels and headrests, as it's the most premium, high-quality soft-tanned leather. Only flawless hides are used, and they're examined millimeter by millimeter to ensure that they are in perfect condition. Eight leather hides covering 35 m² are lovingly handcrafted for each Lamborghini and this task takes one employee over a week to complete, not least because the work sometimes has to live up to a whole array of specific customer wishes.

"Each one of our customers has their own personality. Regardless of how individual their request is, we'll make it happen as long as it's doable." Accessori Originali Lamborghini is full of possibilities to personalize the interior. From leather steering wheels in a color of your choice and with customized stitching to mats with your chosen inscription, your imagination will truly know no bounds. Apart from perhaps one: each personalized feature must meet with the approval from the Marketing department, which carefully verifies whether or not a customer's wish is compatible with Lamborghini's aesthetic standards.

▮▮ OUR LEATHER INTERIORS ARE MADE FROM A UNIQUE MATERIAL - PASSION. ▮▮

LEATHER IS A NATURAL PRODUCT. NO TWO PIECES ARE IDENTICAL, EACH ONE IS UNIQUE. AND THAT'S EXACTLY HOW THEY SHOULD BE TREATED.

THE SELLERIA - WHERE LEATHER IS TURNED INTO THE STUFF OF LEGENDS.

Things are a lot quieter at the selleria than they are in a Lamborghini. That's because the work done there calls for the utmost concentration and care. The staff there all have many years of experience with the tools of the trade, sewing machines, and thread, all of which they use to make first-class parts for the car interiors. They also draw on their wealth of experience when examining the leather supplied by the tanneries. Each and every millimeter of the material is inspected by their trained eyes for even the minutest of blemishes. Because the leather has to be perfect in order to become part of the fittings, the seats, or a steering wheel.

The example colors shown here are just a few of the many ways you can design the interior of your Lamborghini in an even more individual way.

▯▯ INNOVATION IS NO COINCIDENCE. IT IS THE RESULT OF PASSIONATE DEDICATION. ▯▯

If you compare a modern-day Lamborghini with a model dating back 25 years, the differences in comfort and convenience technology will really come to the fore.

"We've brought out numerous innovations and, especially in the last ten years, have really stepped on the gas in terms of these developments - with the Murciélago, the Gallardo and the Aventador," says Corrado Rebbottini, Head of Electronic Car Development at Lamborghini, where he's in charge of developing navigation systems, infotainment, music interfaces, rear-view cameras and parking sensors.

The greatest challenge facing him at the office every day is to make ever more complex technology as user-friendly as possible. His task is most evident in the development of infotainment system, which acts as the interface between the driver and the onboard multimedia, navigation, communication and driver assistance systems.

"The infotainment system is the centerpiece of the onboard electrical system and boasts flawless technological precision - which you can feel."

This level of comfort and convenience can be enhanced even further with original accessories such as navigation systems with high-definition color displays and high-quality maps, Bluetooth interfaces, and rear-view cameras featuring a wide viewing angle that give you razor-sharp images. Be it series equipment or accessories, every part meets the same top-quality standards. And ensuring that these are met requires not only the greatest care and technical expertise but also the unequivocal drive to make each component even better. And this is precisely what fuels Rebbottini's enthusiasm:

"I love exhausting the technological possibilities and exceeding customers' expectations with state-of-the-art solutions." He's already dreaming up the next lot of technological innovations.

**NAVIGATION KIT:**

The world's fastest super sports cars are built in Sant'Agata Bolognese. The only way to make them even faster is to take the most direct route. Which is precisely what our navigation kit will show you in consummate Lamborghini style, namely extremely quickly. Also available with a rear-view camera kit.

– | Gallardo | –

NAVIGATION & RVC KIT
